Sitecraft

City Planning Studio

Plan a real place in 2D and 3D.

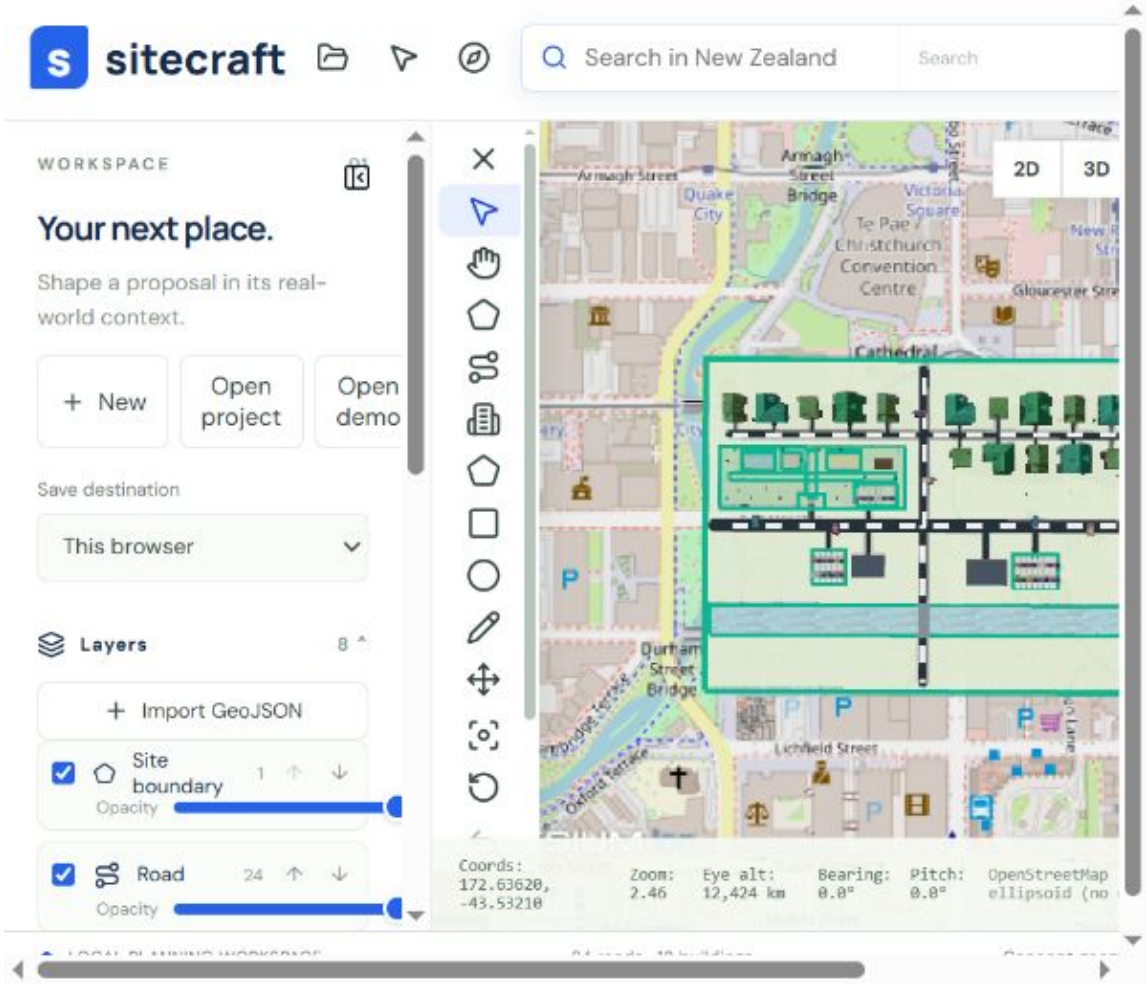

Simple tools. Clear plans. Better places.

01 - WORKSPACE

Start with a real map

The map helps you plan in the correct place.

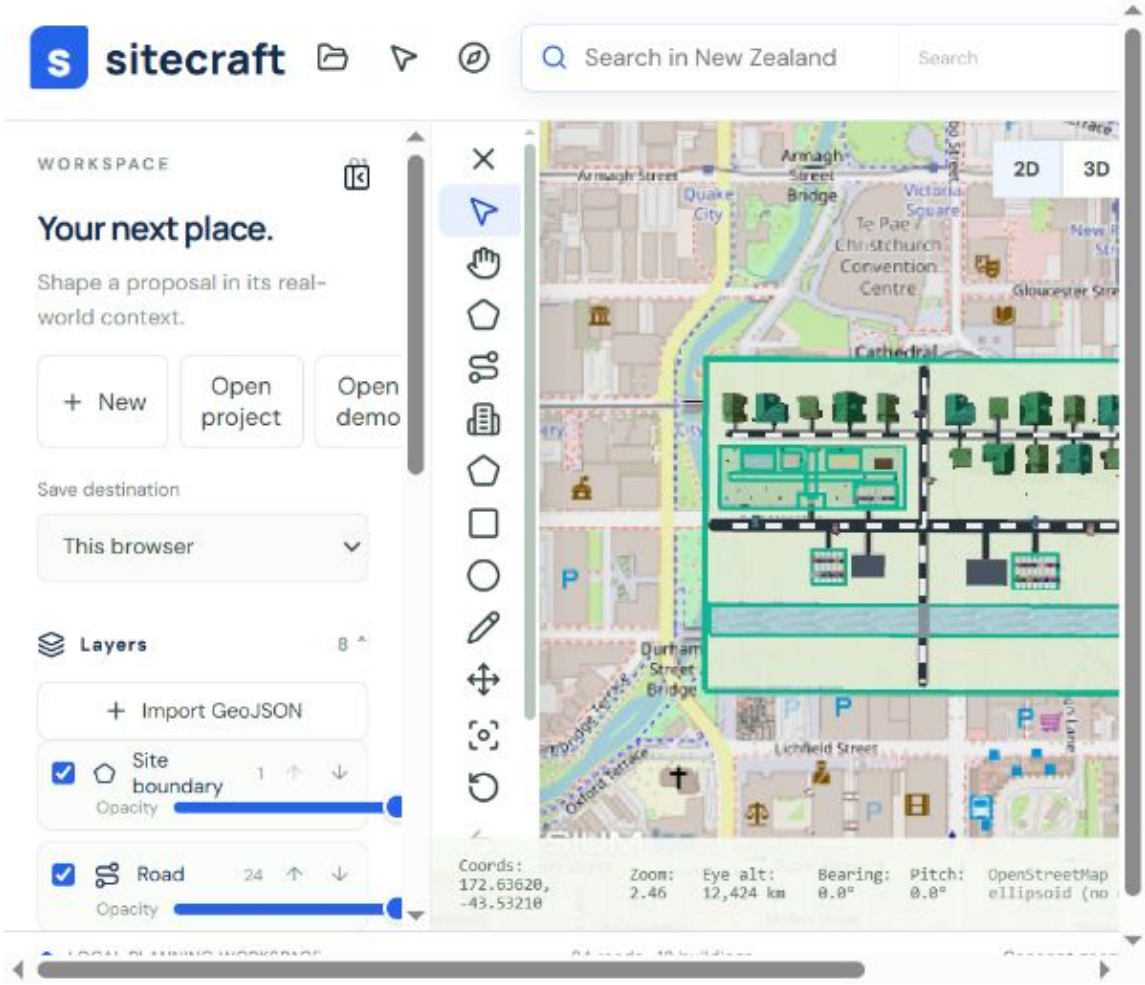

One screen for the whole plan

Use the map in the middle. Choose objects from the left. Open details from the right.
The example project has roads, homes, trees, cars, benches, a bridge, parking and a park.

02 - 2D PLAN

Draw and arrange the site

2D view makes the full layout easy to read.

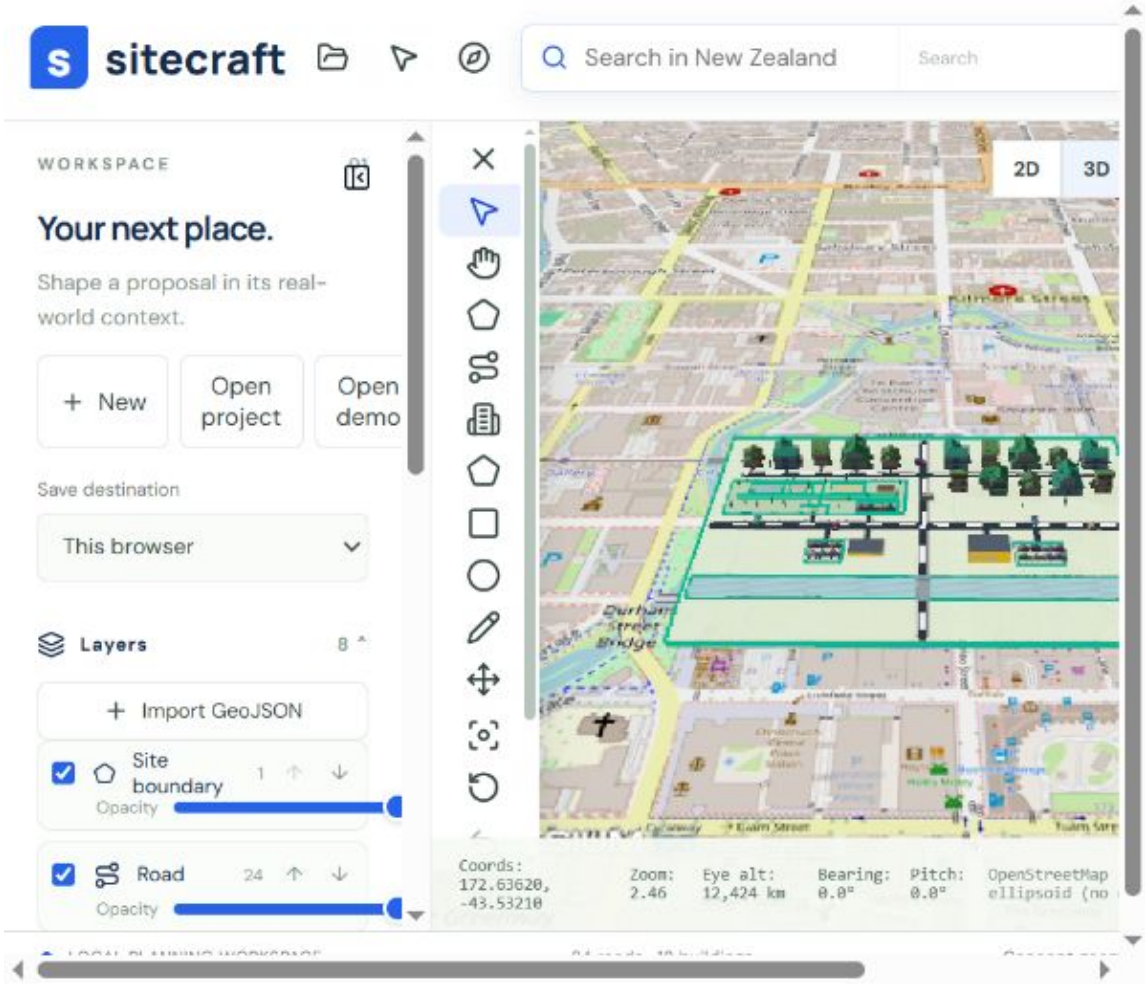

Use 2D for the big picture

Draw a boundary. Add roads and plots. Place each building where it belongs.
The green outline shows the project area. Roads connect homes, the park and shops.

03 - 3D CITY

See height, space and shape

3D view turns the flat plan into a small city model.

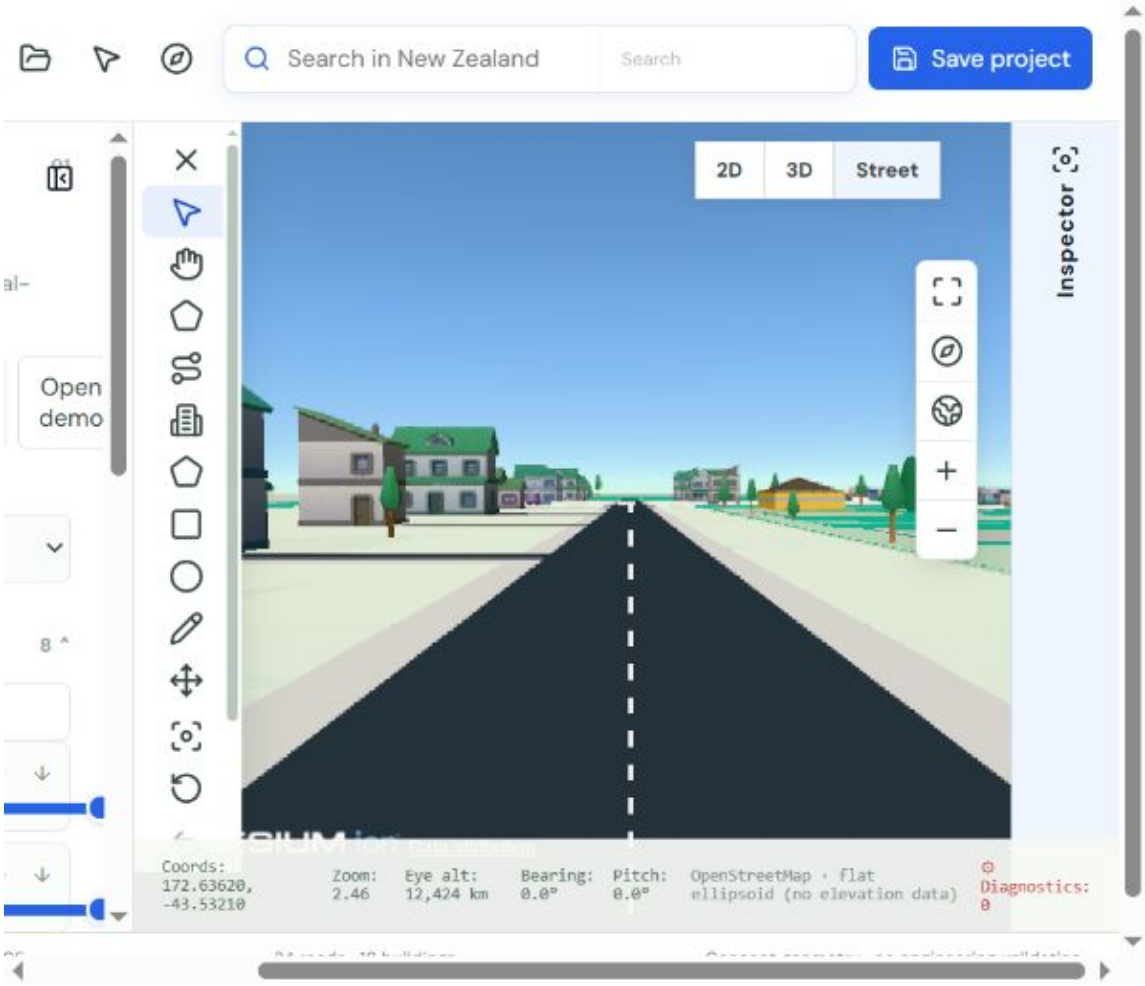

Check how the place will feel

See homes, tall buildings, roads and trees together. Turn the view and zoom in or out.
This helps you find empty space, tight roads and objects that need to move.

04 - STREET VIEW

Look from a person's view

Street view shows what a road may feel like at eye level.

Walk through the idea

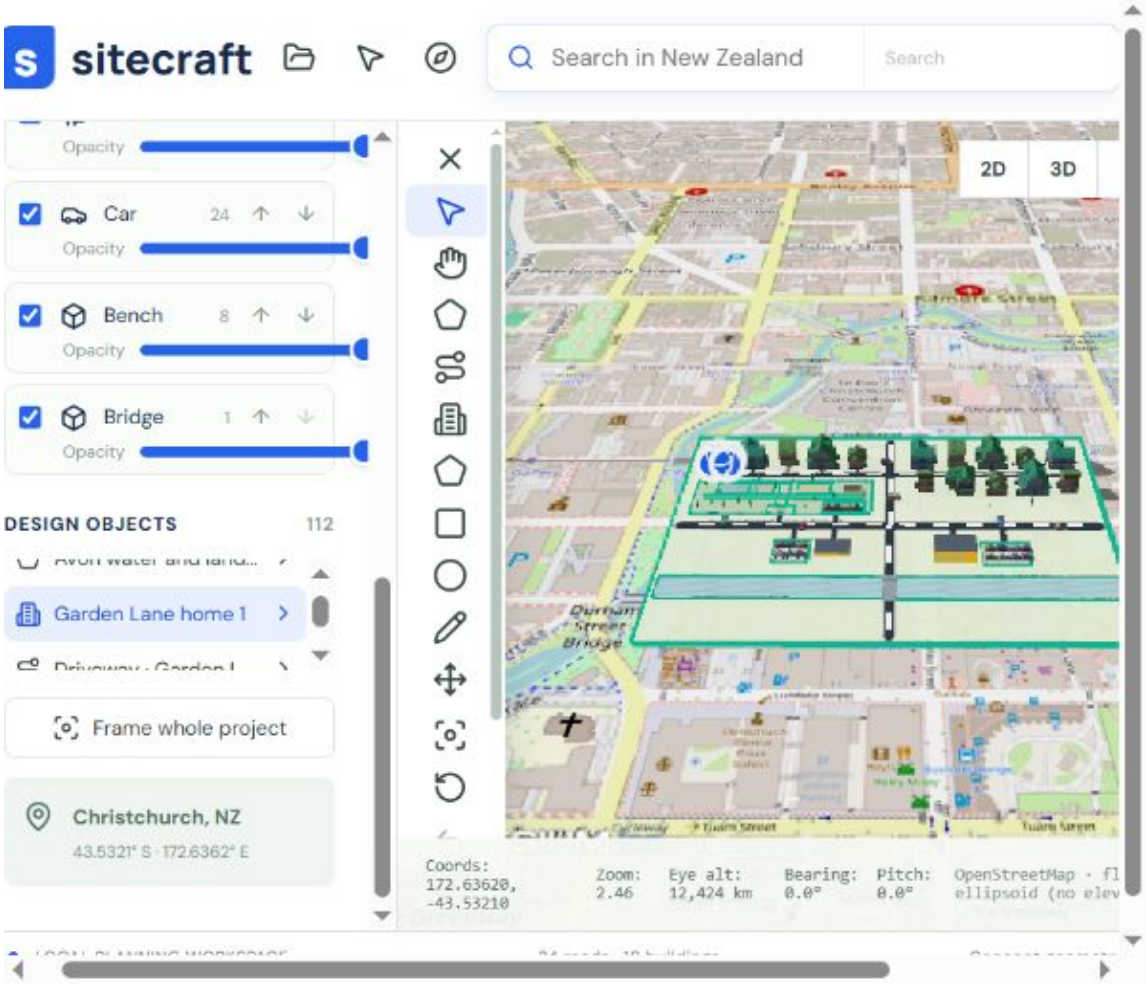

Check the road, homes, trees and open space from the street.

Use the Hand tool to look around in 360 degrees without drawing anything.

05 - EDIT OBJECTS

Choose one object and change it

Every item can have its own place, size, shape and look.

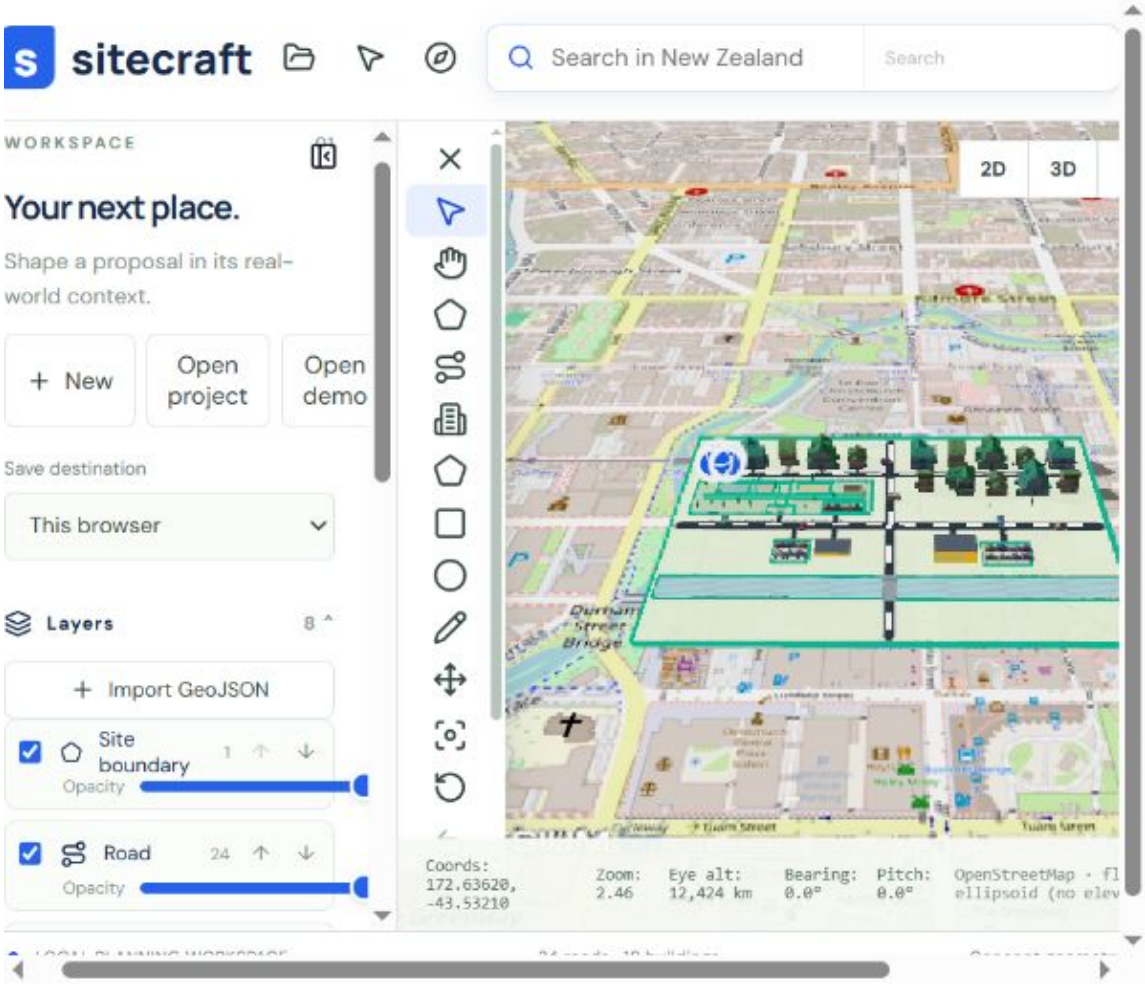

Easy object control

Click a home, car, tree, bench or bridge. Move it, resize it, rotate it or change its style.
Layers can also be hidden or made lighter with the blue opacity bars.

06 - SAVE PROJECT

Keep the plan and open it again

Save your work before you start another project.

Your work stays with you

Save in the browser for quick use, or save a project file on the computer.
Open the file later and the plan returns to the same map location.

What can Sitecraft help you do?

1 Plan

Draw a clear boundary on a real map.

2 Build

Add roads, homes, parks and parking.

3 Check

See the idea in 2D, 3D and Street view.

4 Improve

Move and resize objects until they fit.

5 Share

Save the project and open it again.

6 Grow

Add more detail as the plan becomes ready.

Turn an idea into a place people can understand.

Concept planning tool - not for engineering approval.
